CVPR 2026 WORKSHOP

MUV Workshop Opening

Machine Unlearning for Vision: Forgetting as a Responsible Counterpart to Learning

Denver Convention Center, CO | June 3rd, 2026 | Mile High 1AB

What is Machine Unlearning?

Machine Unlearning is the process of intentionally removing the influence of specific training data from a trained machine learning model, without the computationally expensive need to retrain the entire model from scratch.

Data Deletion (Privacy)

Complying with privacy regulations like the GDPR "Right to be Forgotten".

Model Security

Eradicating the effects of malicious, poisoned, or adversarial data injections.

Bias & Fairness

Removing historical biases and unfair correlations learned by the model.

Copyright Adherence

Unlearning copyrighted or licensed material, especially in Generative AI.

How Machine Unlearning Works

Data Level

PRE/DURING TRAINING

Isolating influence of specific samples via data pruning and selective removal or through influence functions.

Model Level

PARAMETER MODIFICATION

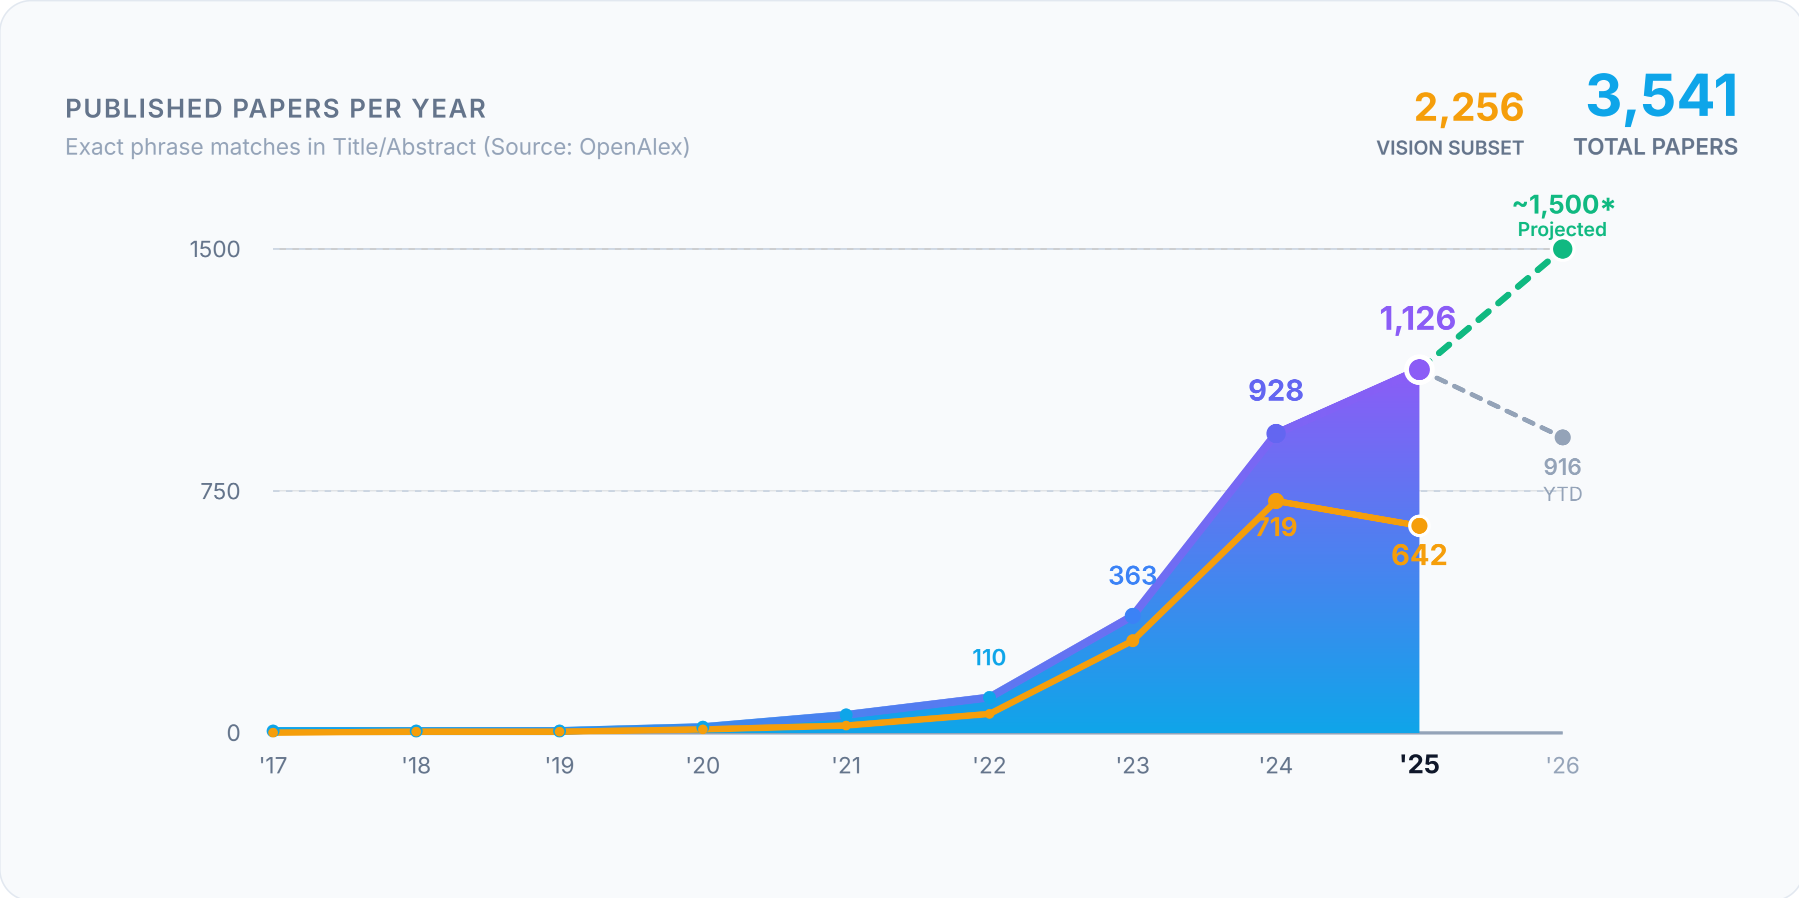
Surgically modifying model weights (e.g., via low-rank projections or fine-tuning) to erase knowledge post-training.

Post Level

INFERENCE TIME

Runtime interventions like refusal vectors and prompt editing to guide model behavior without weight changes.

Explosive Growth of Machine Unlearning



2026 MUV Submissions by Topic

- Generative AI (52.4%)
- Recognition Tasks (23.8%)
- Ethical & Legal (19.0%)
- Core Methodologies (4.8%)

Selection & Acceptance Statistics

7

PROCEEDINGS TRACK

2 Orals + 5 Posters

5

NON-PROCEEDINGS

Extended Abstracts

OVERALL ACCEPTANCE RATE

57.1%

Invited Speakers & Program

Sijia Liu

Michigan State University

Rohit Gandikota

Northeastern University

Max Dreyer

Fraunhofer HHI

Raymond A. Yeh

Purdue University

Lily Weng

UC San Diego
